# Blinkit Dynamic Sales Dashboard Report

## 1. Introduction

The Blinkit Dynamic Sales Dashboard is designed to analyze sales performance and product distribution using interactive visualizations.

The dashboard helps in understanding sales trends, outlet performance, item categories, and customer ratings.

The analysis is based on sales data from Blinkit, an Indian quick-commerce platform known for delivering groceries and essentials quickly.

The dashboard was developed using Microsoft Power BI to provide dynamic filtering, visual analytics, and business insights.

## 2. Objectives of the Dashboard

• Analyze total sales performance

• Compare different outlet types and locations

• Evaluate item category performance

• Study customer ratings and product visibility

• Provide interactive filtering for better analysis

## 3. Key Performance Indicators (KPIs)

Total Sales: $1.20M – Total revenue generated

Average Sales: $141 – Average sales per item

Number of Items: 8523 – Total items sold

Average Rating: 3.9 – Customer rating for products

## 4. Dashboard Filters

The dashboard includes interactive filters such as:

• Outlet Location Type

• Outlet Size

• Item Type

These filters allow users to dynamically analyze data based on specific categories.

## 5. Sales Trend Analysis

The Outlet Establishment chart shows sales performance over time.

Sales increased steadily after 2012 and reached the highest value in 2018 ($205K).

After 2018, sales slightly decreased but remained relatively stable.

## 6. Fat Content Analysis

Products are categorized into Low Fat and Regular.

Both categories contribute almost equally to total sales with an average sales value of around $141–$142.

## 7. Item Type Performance

High performing categories include household items, dairy products, starchy foods, snack foods, and fruits and vegetables.

Lower performing categories include baking goods, health products, and soft drinks.

## 8. Outlet Size Analysis

Medium outlets: $507.90K

Small outlets: $444.79K

High outlets: $248.99K

Medium-sized outlets generate the highest sales.

## 9. Outlet Location Analysis

Tier 3: $472.13K

Tier 2: $393.15K

Tier 1: $336.40K

Tier 3 cities contribute the highest sales.

## 10. Outlet Type Analysis

Supermarket Type1: $787.55K (5577 items)

Grocery Store: $151.94K (1083 items)

Supermarket Type2: $131.48K (928 items)

Supermarket Type3: $130.71K (935 items)

Supermarket Type1 contributes the largest share of sales.

## 11. Key Insights

• Total revenue generated is $1.20M.

• Medium-sized outlets perform best.

• Tier 3 locations generate the highest sales.

• Supermarket Type1 contributes the majority of sales.

• Average customer rating is 3.9.

## 12. Conclusion

The Blinkit Dynamic Sales Dashboard provides valuable insights into sales trends, outlet performance, and product categories.

Using Microsoft Power BI, businesses can analyze large datasets and make data-driven decisions to improve performance and profitability.
